Overclock accelerator

Exhibit A — Statement of Work (CELPIP Marketing Re-Launch)

SOW Date: March 31, 2026

---

1. Parties

This Statement of Work ("SOW") is entered into by and between Zap Learning, LLC (d/b/a Overclock Accelerator) ("Overclock") and Prometric LLC ("Client").

This SOW, together with the Master Services Agreement to which it is an Exhibit, constitutes the entire agreement between the parties for this engagement. This SOW is governed by the Master Services Agreement; capitalized terms not defined herein have the meaning attributed to them in the Master Services Agreement.

2. Engagement Overview

CELPIP (Canadian English Language Proficiency Index Program) is a leading English language proficiency test for immigration to Canada and Australia, operated by Prometric through its subsidiary Paragon Testing Enterprises. The current celpip.ca website is built on WordPress and serves as the primary marketing and informational hub for test takers, prep providers, immigration agents, and institutional score users globally.

This engagement is structured as a **three-phase website modernization and marketing infrastructure program** designed to migrate celpip.ca to a modern tech stack, establish a scalable microsite and landing page system, and integrate the site into Prometric's evolving marketing operations.

Each phase is intended to span 4–6 weeks. The engagement is structured with phase-level termination flexibility — Client may terminate at the end of any phase with written notice; all deliverables completed through that point transfer to Client.

Phase	Description	Fee
Phase 1: Microsite Infrastructure	Component library, CMS, and landing page assembly system	$25,000
Phase 2: Design Refinement + Marketing Integration	Widget polish, Braze/analytics integration, content workflows	$25,000
Phase 3: CELPIP Website Rebuild	Full site migration to Next.js + Sanity + Azure	$25,000
Total Engagement		**$75,000**

3. Scope of Services

A. Phase 1: Microsite Infrastructure ($25,000)

Overclock will build the foundation for CELPIP's marketing landing page system — a modular component library backed by a headless content management system (CMS) that enables marketers to assemble, edit, and deploy audience-targeted microsites without developer involvement.

i. Component Library & Page Templates

- Design and develop a library of reusable UI components (widgets) based on the content modules specified in Appendix A of Client's RFP, including: hero sections, CTAs, feature highlights, testimonial quotes/videos, FAQ accordions, vanity metrics, forms, and resource lists.
- Develop page templates for landing pages and microsites, including a form-in-header landing page template optimized for paid campaign conversion.
- Components will be built mobile-first and will be designed to meet or exceed the accessibility compliance level of the existing celpip.ca site, as measured by automated WCAG 2.2 AA auditing tools (axe-core). Components will target zero critical automated violations.
- Visual design will be based on the existing CELPIP brand guidelines (Poppins/IBM Plex Sans typography, navy/green accent palette). Overclock will generate multiple design variations per component for Client review and selection. Material visual redesign (new brand identity, logo, or design system) is not included.

ii. Content Management System (CMS)

- Configure Sanity as the content management system, with structured content types for all widget and page data.
- Establish the content schema to support reusable, composable page assembly — content as data, not pages.
- Configure role-based access and content staging (draft → publish workflow).
- Enable MCP (Model Context Protocol) integration so that AI tools (Copilot, Cursor, Claude) can read from and write to the CMS, enabling prompt-driven content creation and bulk updates.

iii. AI-Assisted Page Builder

- Build an AI-powered workflow that allows a marketer to describe a microsite (target audience, messaging, geography) and receive an initial page structure with generated copy, assembled from the component library and populated in Sanity.

iv. Sample Microsites

- Deliver 5 sample microsites demonstrating the system across distinct audience segments and geographies (e.g., India, Philippines, Australia, Latin America, Middle East).
- Each microsite will use the component library and page templates, populated with AI-generated first-draft content appropriate to the target audience.
- Sample microsites serve as working references for Client's marketing team to replicate and customize for future campaigns.

v. **Content Workflow Enablement**

- Train Client’s marketing team (up to 3 people) on the Sanity CMS: content editing, page assembly, publishing workflow, and AI-assisted content creation via MCP.
- Document the microsite creation workflow end-to-end.

vi. **Deliverables at end of Phase 1:**

- Deployed component library with 10–15 production-ready widgets
- Sanity CMS configured with content schema, roles, and staging workflow
- 5 sample microsites demonstrating the system across target markets
- AI page builder workflow operational
- All code and configurations delivered to Client's GitHub repository

B. Phase 2: Design Refinement + Marketing Integration ($25,000)

Overclock will refine the microsite system for production use and wire it into the Client's marketing stack.

i. **Design Refinement**

- Work with Client's design team and/or Overclock's design team to create polished visual variations of the widget components.
- Generate 3–5 design variants per key widget (hero, CTA, testimonial, feature block) using AI-assisted design workflows. Client selects preferred variants; Overclock refines selected designs.
- Produce an image generation style guide so Client's team can produce on-brand imagery via AI tools for future microsites.

ii. **Marketing Stack Integration**

- Integrate Braze lead capture beacons into microsite forms and CTAs. When a visitor submits a form, their data (name, email, phone) flows into Braze for nurture campaign enrollment.
- Configure Google Tag Manager container with: Google Analytics, Microsoft Clarity, Google Ads pixel, Meta Ads pixel, Geotargetly (geofencing), CookieYes (cookie consent), and Braze SDK.
- Integrate Sendgrid for transactional form confirmations where applicable.
- *Note: Braze account provisioning and campaign creation are Client's responsibility. Overclock will integrate the site-side beacons and data flow; Overclock is not responsible for campaign configuration within Braze.*

iii. **Deliverables at the end of Phase 2:**

- Refined widget designs implemented in production
- Image generation style guide
- GTM container configured with all specified third-party integrations
- Braze beacon integration on all microsite forms
- Training session delivered; workflow documentation provided
- Microsites ready for live campaign use

C. Phase 3: CELPIP Website Rebuild ($25,000)

Overclock will rebuild celpip.ca on a modern stack using the component library and CMS established in Phases 1 & 2.

i. Site Migration

- Rebuild the existing celpip.ca site on Next.js, powered by Sanity CMS, hosted on Azure (or Client-preferred hosting provider).
- Migrate all existing site content into the Sanity content schema. Content will be migrated as-is or as provided at the start of the engagement. *Overclock is not responsible for rewriting, editing, or improving existing copy.*
- Replicate the existing site's page structure and navigation with functional parity.

ii. Dynamic Modules

- Build the following interactive modules, pulling data from Client's registration API (`celpip-registration.paragontesting.ca`):
  - **Exam Booking Search** — search by location and test type, display available sittings with dates, times, and pricing
  - **Exam Listing** — filtered test sittings per page context (country, city, centre)
  - **Test Centre Map** — Google Maps integration displaying centres per geography

- Build the following CMS-driven dynamic modules:
  - **Resource List** — blogs, podcasts, webinar archives, YouTube Lives, filterable by category
  - **Prep Materials Listing** — filterable by type
  - **Testimonial display** — quotes and videos, filterable by audience/category
  - **FAQ module** — expandable, filterable by category
  - **Score Alignment Chart** — interactive CLB/DHA/CEFR equivalency display

Note: Overclock will build the client-side integration with Client's registration API based on the documented endpoint. If the API changes, is unavailable, or requires authentication not provided during the build period, Overclock will work with Client to resolve but is not responsible for API availability or upstream data issues.

iii. SEO Migration

- Overclock will generate an automated crawl of the existing celpip.ca site and produce an initial URL redirect map covering all indexed pages.
- Client will review and confirm the redirect mappings, including any decisions to consolidate, deprecate, or restructure pages.
- Overclock will implement the confirmed redirect map in the Next.js middleware.
- Overclock will migrate existing meta titles, descriptions, and Open Graph tags into Sanity.
- Overclock will generate and submit an updated XML sitemap.
- Overclock will use commercially reasonable efforts to preserve the site's existing SEO standing. Some temporary fluctuation in search rankings is normal during any platform migration and is not indicative of a deficiency in the deliverables.

iv. Accessibility

- All pages and components will target zero critical violations as measured by automated WCAG 2.2 AA testing (axe-core / pa11y) at launch.
- Overclock is not providing a formal WCAG compliance certification or legal attestation. A comprehensive WCAG 2.2 AA certification requires manual assistive technology testing, which is outside the scope of this engagement. Client may elect to commission a formal audit from a certified accessibility vendor post-launch.

v. Integrations

- Cloudflare for CDN and DDoS protection (or Client's existing CDN)
- CookieYes cookie consent integration
- Userway accessibility widget (carried over from existing site)
- Google Maps embed for test centre pages
- B2B lead forms → Salesforce (maintained from existing flow)
- B2C lead capture forms → Braze
- B2C webinar registration → Braze + Zoom

vi. Performance & Security

- Next.js static generation and incremental static regeneration for optimal page load performance.
- Overclock will deliver a performant site; however, performance is also dependent on third-party scripts (GTM, analytics, ads pixels, Braze SDK, reCAPTCHA) that are outside Overclock's control.

vii. Cutover & Handoff

- Overclock will deploy the new site to a staging environment for Client review prior to go-live.
- Client is responsible for DNS cutover and will determine the go-live date.
- Overclock will provide 30 days of post-launch bug fix support for issues directly attributable to Overclock's deliverables.
- All code, CMS configurations, content, and documentation will be transferred to Client's GitHub and Sanity accounts.

viii. Deliverables at end of Phase 3:

- Fully rebuilt celpip.ca on Next.js + Sanity + Azure
- All dynamic modules operational
- Content migrated and verified
- SEO redirect map implemented
- Staging environment for Client review
- 30 days post-launch support
- Full codebase and documentation handoff

4. Fees and Payment Schedule

Phase	Fee
Phase 1: Microsite Infrastructure	$25,000
Phase 2: Design Refinement + Marketing	$25,000

Integration	
Phase 3: CELPIP Website Rebuild	$25,000
Total	**$75,000**

Payment shall be made in accordance with the Master Services Agreement:

- Each phase's fee is due upon commencement of that phase's work.
- Client may terminate the engagement at the end of any phase with 7 days' written notice. All work completed through the termination date, including code, configurations, and documentation, transfers to Client.

5. Assumptions & Exclusions

The following assumptions underpin the scope and pricing of this engagement. Material deviations may require a change order.

Assumptions:

- Client will provide timely access to: the existing celpip.ca WordPress site (code and content), the registration API and its documentation, Salesforce and Braze credentials, Google Tag Manager access, and DNS management.
- Client will designate a primary point of contact with authority to approve deliverables and provide feedback within 5 business days of submission.
- Client's registration API is stable and documented. Overclock is building a front-end integration, not modifying the API.
- Braze will be provisioned and accessible by Phase 2.
- Visual design is based on the existing CELPIP brand. No new brand identity, logo redesign, or visual overhaul is included.

Exclusions:

- The e-commerce/checkout experience (test registration, payment processing, prep materials purchase) — this is managed on `celpip-registration.paragontesting.ca` and is out of scope.
- Braze campaign creation, nurture sequence design, or CRM configuration beyond site-side beacon integration.
- Paid media campaign creation or management (Meta, Google, influencer).
- Formal WCAG 2.2 AA certification or legal compliance attestation.
- Content writing, copywriting, or content strategy beyond AI-generated first drafts for sample microsites.
- Ongoing hosting costs (Azure, Sanity, Cloudflare) — Client is responsible for platform subscriptions.
- Multi-language / localization support (noted in RFP as future development, not this scope).

6. Change Control

Any material changes to the scope of services, engagement dates, delivery hours, or other material terms of this SOW must be agreed to in writing by both parties. Such changes may result in adjustments to fees, timeline, or resource allocation.

7. Contacts & Billing

	Overclock Accelerator	Prometric LLC
Primary Contact	Ahmed Haque	Jay Chakrapani
Title	Managing Partner	Chief Technology Officer
Email	ahmed@overclockaccelerator.com	jay.chakrapani@prometric.com
Billing Address	30 River Road, Apt 16A, New York, NY 10044	6211 Greenleigh Ave, Suite 400 Middle River, MD 21220, USA

8. Term

This SOW will terminate and be of no further force and effect upon the earlier of (1) the completion of all Services described above, (2) eighteen (18) weeks from the commencement date, or (3) termination by either party in accordance with this SOW or the Master Services Agreement.

9. Signatures

By signing below, the parties agree to this Statement of Work, which together with the Agreement, form the entire agreement between the parties.

Appendix A: Component Library (Target Modules)

The following modules represent the target component library to be built across Months 1–3. Final module selection and prioritization will be determined collaboratively during Phase 1.

Foundational Content Types

- Buttons (with accessibility labels, style variants)
- CTAs (heading, summary, 1–2 buttons)
- Forms (configurable fields, Sendgrid/Braze/Salesforce/Zoom integration)
- Vanity Metrics (up to 5 key metrics with labels)
- Shared Content / Features & Highlights (up to 8 features with media)

Page-Level Modules

- Hero section (H1, image, summary, buttons, design settings)
- Rich text block
- Image gallery
- FAQ accordion (filterable by category)
- Testimonial quotes (with audience tagging)
- Testimonial videos (YouTube embed, audience tagging)
- Resource list (blogs, podcasts, news, webinars, YouTube Lives)
- Score Alignment Chart (CLB / DHA / CEFR interactive display)

Dynamic / API-Driven Modules

- Exam Booking Search (location + test type → available sittings)
- Exam Listing (contextual sittings per page)
- Test Centre Map (Google Maps)
- Prep Materials Listing (synced from registration system)
- Webinar List (dates, times, presenters)
- Score User Search (by geography and category)
- Prep Programs & Agents Search (by geography, format, network tier)

Page Templates

- Home page
- Landing page (form-in-header, campaign-optimized)
- Standard page (hero + composable modules)
- Catalog page (Country, Region, City, Centre, Prep Material)
- Resource page (Blog, Podcast, News, Webinar Archive, YouTube Live)

Appendix B: Current Site Accessibility Baseline

An automated accessibility audit of celpip.ca was conducted on March 31, 2026 using pa11y (WCAG 2.0 AA ruleset). The homepage returned **54 errors**, including:

Issue	Count
Empty links (no accessible name)	18
Unlabeled form fields	10
Unnamed input elements	8
Insufficient color contrast	6
Untitled iframes	3
Unnamed buttons	2
Forms without submit buttons	2
Duplicate element IDs	2
Missing HTML lang attribute	1
Unnamed select/textarea	2

Overclock's deliverables will target zero critical automated violations at launch, representing a measurable improvement over the current baseline.
